## Design

### Durability and Security

Modern glass ceilings are manufactured using strong and durable materials. The use of safety glass or laminated glass prevents the scattering of pieces in case of breakage, ensuring safety.

### Creative Architectural Solutions

Glass ceilings provide creative and impressive solutions in architectural projects, supporting the unique design of the space and offering various architectural options.

### **Natural Light**

Glass ceilings bring natural light into the interior, creating a brighter and more spacious feel. This contributes to energy savings and enhances the overall attractiveness of the interior.

### **Aesthetic Appeal**

Glass ceilings provide a modern and stylish appearance, contributing to the overall design and creating a visual impact.

### **Visual Width**

Glass ceilings contribute to a sense of spaciousness and openness in the space, even in smaller areas.

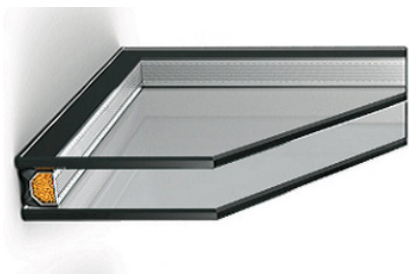

## Energy Efficiency

Glass ceilings made with insulated glass help maintain indoor temperature, minimizing heat loss and improving energy efficiency.

## In restaurants and cafes

Winter gardens are one of the most indispensable parts of restaurants and cafes. The restaurant prefers these areas to meet the outdoor needs of its customers. Cafes and restaurants in such areas use modern stoves. Thanks to this, it is possible to keep the temperature of the winter garden environment at a certain level.

5/16" laminated + 15/32" air space + 15/64" tempered insulated glazing increases energy efficiency by providing thermal insulation of the space. It stands out with its durability against external factors and impact resistance. It also increases interior comfort thanks to its sound insulation feature.

The paint used on all aluminum profile components of the system is anti-fingerprint and stain-resistant. All profiles use Akzo Nobel brand Class-1 paint.

**Anti-Fingerprint Paint**

**Winter Garden Systems and  
Other Systems 100% Integrated**

You can cover the surroundings of the Winter Gardens with either sliding glass systems or automatic guillotine glass systems. Winter garden models can be designed as 100% integrated with these systems, so there will be no problems during assembly.

Optionally, LED technology lighting is used to illuminate our winter gardens. You can adjust the light level and brightness you want with the dimmer. You can turn it to full light when your guests arrive, and dimly light it when you are reading a book.
