Quick Assembly

Design

The ZIP curtain system features a sleek design coupled with modern and innovative functionalities. This system can be controlled remotely and has the capability to open and close both vertically and horizontally, depending on the space. It is quite ergonomic.

Protectiveness

Prevents the entry of flies and insects into your space.

Durability

ZIP curtain fabrics are crafted from highly resilient materials, providing resistance against external weather conditions. They exhibit resistance to the sun's UV rays, rain, wind, and other atmospheric factors.

Water and Stain Resistance

Fabrics with waterproof or water-repellent coatings are commonly employed in ZIP curtain systems. This prevents water penetration during rainy weather.

Light Permeability Control

ZIP curtain fabrics are designed to regulate the entry of light. Consequently, users can adjust the curtain according to their preferences, enabling them to achieve the desired level of illumination indoors.

Air Circulation

The permeability of the fabric is a crucial factor in ZIP curtain systems. Ensuring air circulation facilitates ventilation in the space and eases temperature control, particularly in warm weather.

Dimensions

Hemp-based composition
for natural fabric aspect

Blocks up to 96% of UV
rays

Plays on transparency

Protects from wind

Delivery Time : **2 - 4 weeks**

Engine : **SOMFY**

Warranty : **2 years**

Colors

Thermal protection
Blocks heat; micro-
aerations encourage air
movement

Colour resistance to UV

Easy cleaning

These features support the general use of ZIP curtain fabrics in outdoor applications, offering a durable and functional solution for open-air spaces. We use top-tier fabrics in our products.

Our company, which is among the zip curtain manufacturers, recommends this product to many users and installs it in their homes or workplaces with precision.

As Albau company, we use the French-origin Somfy engine as standard in our Zip Curtain systems.

 Thanks to Radio Frequency Technology, all functions of this fully automatic system can be easily controlled with a single remote.

Serge Ferrari

The Soltis series is a technical fabric group that provides sun control and air permeability. These fabrics typically have an air permeability of 80-90%, enhancing the lighting and temperature comfort of indoor spaces. Additionally, they offer UV protection, safeguarding users from the harmful effects of the sun.

The assembly of the system is extremely easy thanks to the sectional side upright profile and independent motor box. When maintenance is needed, only the necessary points can be accessed without completely disassembling the system.
